WEATHER

WEATHER SYNOPSIS BY REGION:

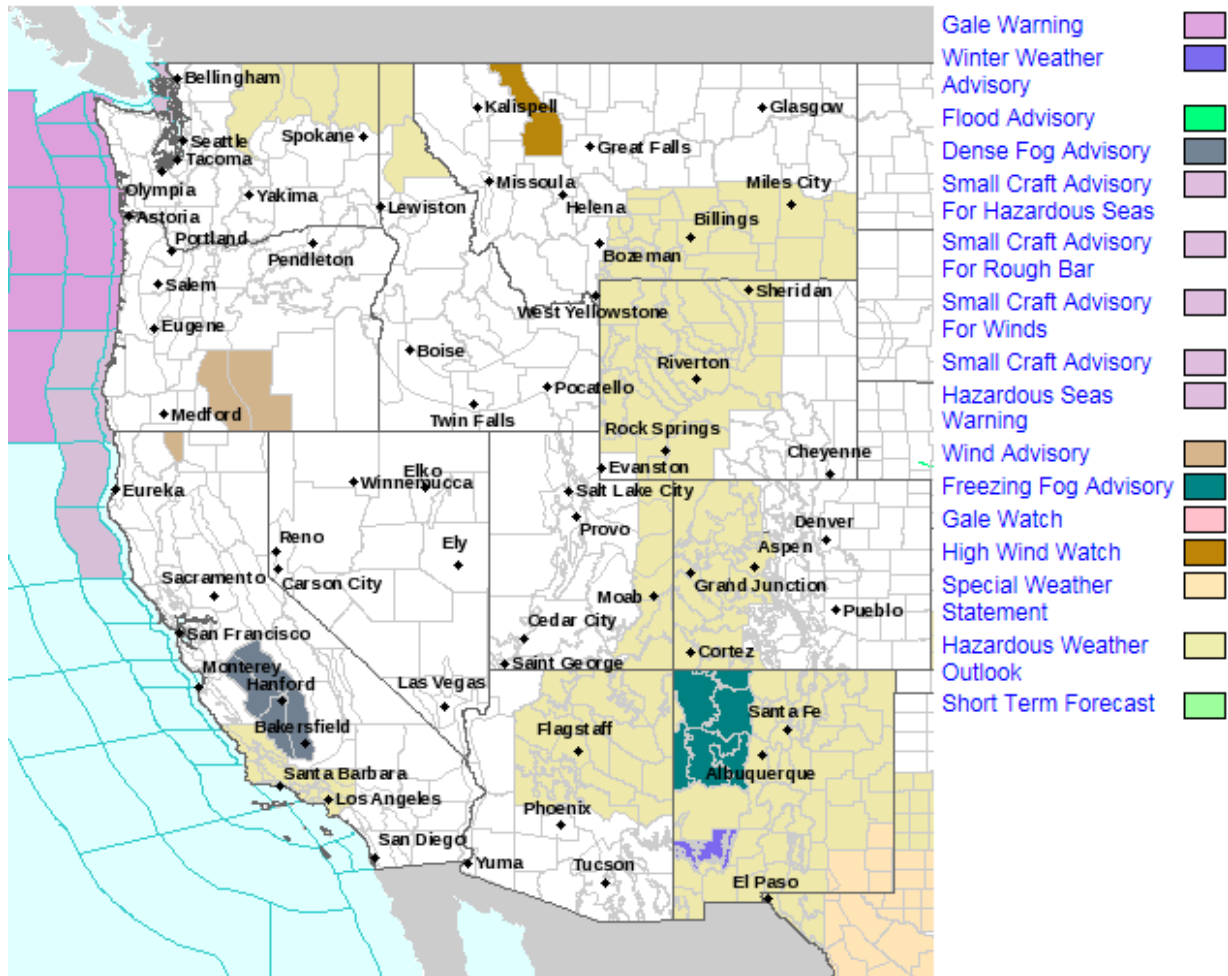

NORTHERN CALIFORNIA

High Pressure lingers one more day across the region with mainly clear, warm and dry conditions, along with pockets of light northeast/offshore winds. However, deeper valleys disconnected from the wind could see pockets of low clouds/fog through the morning hours. Otherwise, a cooling trend begins Thursday and continues into the weekend as a series of cold fronts brush the area with clouds and some showers. Best chance of wetting rain will be for the northern half of Northern California; especially the northwest mountains where rainfall totals of 0.50" to 1.50" are possible through the weekend. Rain amounts are expected to taper off significantly further south, with little to no rain south of I-80 or for the eastside predictive service areas. Weak Pacific high pressure builds just off the coast early next week, bringing a return to drier/warmer offshore flow. Winds will be transitioning from northeast to east flow this morning to a more south to west wind late today into the weekend, before northwest winds return Monday, shifting to the north and northeast Tuesday and Wednesday.

SOUTHERN CALIFORNIA

Offshore winds of 10 to 20 mph with gusts to 35 mph will surface across the mountains and below the canyons and passes of Southern California through Thursday morning due to weak surface high pressure over the Great Basin. Winds will become variable less than 10 mph over most of the region Thursday afternoon through this weekend as the pressure gradient becomes flat. Temperatures will warm a couple degrees each day through this weekend as high pressure aloft slowly builds over California. Temperatures will be around 10 degrees above normal by this weekend, with the warmer valley locations of Southern California approaching 80 degrees. Maximum temperatures today will be in the upper 40s and 50s in the mountains and mid-60s to mid-70s in the valleys. Minimum humidity away from the San Joaquin Valley will be mainly between 12% and 25% through this weekend. Temperatures will cool a few degrees and humidity will increase around 5% early next week as the high pressure aloft weakens.
